My Kiln Firing

Materials

Glaze: Clear Gloss

Clay Body: Standard Stoneware

Firing Temperature: 1250°C

Kiln Results

Maturity: 99.1%

Surface Quality: overfired (running, blistered)

Clay Shrinkage: 11.4%

Final Glaze Color: #ffffef

Notes

This recipe was generated using ceramic chemistry simulation. The maturity calculation is based on silica-alumina-flux ratios and firing temperature. Always test fire a small sample before committing to a full kiln load.
